SUMMARY

Business Systems Analyst with mid-level experience driving data-focused solutions across sales, customer service, and technical support functions. Delivered \$5,000+ monthly recurring revenue by translating requirements into streamlined onboarding workflows, and reduced support tickets by 30% through process redesign and clear documentation. Skilled in requirements engineering, process modeling, stakeholder communication, and SQL-based reporting. Seeking to leverage analytical expertise to enhance operational efficiency and customer outcomes for a forward-thinking organization.

WORK EXPERIENCE

Top Notch Worldwide / The Venture Events

- Increased customer satisfaction and repeat sales by 15%.

Caricare Aftersales Services

Mobile Technician

Oct 2019 - Apr 2020

Serrekunda, The Gambia

- Repaired smartphones and tablets with improved workflow and spare-parts process control.
- Leveraged the company's CRM system to analyze customer usage patterns and recommend suitable devices, increasing match accuracy and enhancing overall customer satisfaction
- Improved service consistency through structured diagnostics and repair procedures.
- Contributed to a 60% recovery improvement and 70% client satisfaction increase.

PROJECTS

Digital Customer Service Ordering & Provisioning System

- Redesigned telecom service ordering workflow to reduce activation delays and eliminate duplicate data entry. Tools: Draw.io, Process Modeling, Requirements Documentation. Outcome: Defined an integrated workflow to reduce activation cycle time and errors.

Healthcare Appointment Scheduling & Intake Optimization

- Redesigned healthcare appointment and intake workflows to reduce no-shows and shorten check-in delays. Tools: Process Analysis, Requirements Engineering, KPI Mapping. Outcome: Structured a TO-BE model aimed at reducing no-shows and improving intake throughput.

Incident Response Priority Calculator

- Developed a SOC-style triage tool to score incident severity and recommend response actions. Stack: HTML, CSS, JavaScript. Outcome: Built repeatable severity and response guidance for faster incident triage.

Operational Performance KPI Analysis

- Developed a service activation and support efficiency scenario focused on operational visibility, risk detection, and leadership decision support. Tools: SQL, KPI Framework Design, Dashboard Planning. Outcome: Delivered a recurring KPI governance model linking metrics to operational actions.
